We will be fixing the alignment, padding and spacing of our code. You have been given data from Figma regarding the objects' size and spaces, which you must use to improve the code. I have given you x,y, height, and width. x,y are coordinates of the top left point of a node. For the children who have padding or margins, I also gave you the space available on 4 sides of them.

Based on this, you need to meticulously check if the current padding and margin classes are correct for each of the divs. Don't fall prey to taking all the values as they are because some of them are just measurements and not exact specifications. Use the layout and alignment tags to help your judgement and fix the code if it is incorrect anywhere.

For example, a component aligned to the left has `space_left = 20` but `space_right= 800`, this means that space at the left is important and will help us in coding but the space on the right is just what is there in design, hence irrelevant and should not be included in the code.

Also, note that the spaces are cumulative, so if there's a `p-5` ($5*4 = 20\text{px}$) padding in the parent div and `m-3` ($3*4 = 12\text{px}$) margin in its child, and there is `32px` of space in the design data. It means that the padding and margins are correctly working out.

First, think about what needs to change in the code div by dive and in the end give me the modified code.
